

Distribution of Cities

Distribution of Cities

In 1960, 9.2 million people, or 37% of the national population, lived in urbanized areas, including about 7 million people (28%) in cities (-si districts) and 2.26 million people in -eup districts, where the -gun district offices were located. The urban population has increased significantly since the late 1960s. Ten years later, in 1970, the proportion of the population of -eup districts (9.1%) was similar to that of ten years ago, but the population of -si areas (12.9 million) nearly doubled. As a result, the population of -si and -eup areas accounted for 50.2% of the national population, becoming the majority. The urban population has increased rapidly, and as of 2010, the population of -si districts was 82% of the national population, and the population of -si and -eup districts was 90.7%. According to the 2020 Census, 91% of the population lives in -si/-eup areas, and the population living in -si districts accounts for 81.2%.

Changes in Urban Population by Period

Planned Cities

The construction of planned cities started in the 1970s. The industrial functions of Seoul were relocated to Banwol New Industrial City (Ansan-si today). Yeocheon-si for the Yeocheon Industrial Complex and a hinterland city for the Changwon Industrial Complex were planned. Gwacheon-si was planned as the 2nd government complex to relocate the central government's administrative functions. In the 1980s, Daedeok Research and Academy City (Daedeok Research and Science City today) was planned to develop Korea's sciences and technology. New towns were also constructed as hinterlands to support newly built industrial complexes.

In the late 1980s, the First New City Plan of the Seoul Metropolitan Area was initiated to respond to the rapid increase in housing prices in Seoul. As a result, five new large-scale residential cities, including Bundang, Ilsan, Pyeongchon, Sanbon, and Jungdong, were developed. These new cities greatly contributed to the metropolitanization of the Seoul Metropolitan Area. In the 2000s, according to the Second New City Plan, more new cities were built in the Seoul Metropolitan Area. At the same time, innovation cities were built beyond the Seoul Metropolitan Area to achieve balanced national development by relocating public administrative agencies and research institutes to these innovation cities. By 2020, the third set of new cities in the metropolitan area was planned and is currently under construction.

New Town in Korea

City Name	Characteristics	Location	Planned Population	Development Purpose and Urban Characteristics	Construction period
Banwol New Industrial City	Industrial City	Ansan-si, Gyeonggi-do	200,000	Population Distribution in Seoul, Attracting Small and Medium Businesses in Urban Areas	1977-1987

Housing and Residential Environment

Since 2000, Korea has continuously built more than 500,000 residential units every year. From 2011 to 2020, a total of 6,966,652 residential units were constructed. The number of residential units built each year varies yearly, from 530,000 in 2013 to 820,000 in 2017. There is a very large variation in the number of residential units built by year depending on -si/-do areas. Daegu supplied 5,613 residential units in 2012 and 31,187 in 2016 and recorded the greatest difference of 5.6 times in supply. Gangwon-do supplied 6,242 residential units in 2011 and 24,548 in 2018, which is about four times the difference in the number of residential units built. On the other hand, Seoul has supplied an average of 72,974 residential units over the past ten years. The annual variation in the number of residential units built by year is 1.3, the smallest in the country.

In the 2010s, 2,337,428 houses, accounting for 33.6% of all residential units built, were built in the Seoul Metropolitan Area, including Seoul (10.5%), Incheon (2.6%), and Gyeonggi-do (20.4%). At the same time, 780,000 housing units were provided in the Yeongnam region, 600,000 units in the Chungcheong region, and 420,000 units in the Honam region.

The number of vacant houses is increasing across the country. In 1995, the number was about 360,000 units, but as of 2020, it increased to 1.51 million, accounting for 8.2% of the total residential units. Except for Sejong, the proportion of vacant houses in metropolitan cities is 3-9%, with the lowest at 3.2% in Seoul and

City Area

When comparing the area of a total of 85 city-level local governments, including a special city, metropolitan cities, a special self-governing city, self-governing cities, and administrative cities, cities in Gyeongsangbuk-do and Gangwon-do are large in area. Andong-si is the city with the largest area at 1,522 km², followed by Gyeongju-si (1,325 km²) and Sangju-si (1,255 km²). On the other hand, cities in Gyeonggi-do are small in area. Guri-si is the city with the smallest area at 33.3 km², followed by Gwacheon-si (35.9 km²) and Gunpo-si (36.5 km²). Except for a special city and metropolitan cities, there is no high correlation between the population size and the area of the remaining self-governing cities and administrative cities. For example, Suwon-si and Goyang-si, which have a population of more than 1 million, have areas of 121 km² (71st) and 268 km² (64th), respectively. These cities are relatively small in area compared to their population size.
